

ROLL-FED TAPE/FILM SYSTEM FOR APPLICATION OF ADHESIVE
TO VARIOUS MEDIA IN INKJET PRINTING DEVICES

ABSTRACT OF THE DISCLOSURE

5

Conventional media receives print imaging and an adhesive during a printing operation thereby converting such conventional media into a label, i.e., media having print imaging and an adhesive for application to a contact or display surface. Print imaging is applied in conventional fashion. Adhesive is applied as taken from a reel-form stock including in various embodiments and configurations protective backing sheets and the like supporting application of adhesive to media to produce as output labels on arbitrarily selected media. As a result, users produce labels from arbitrary media and need not limit selection to commercially available label-making media.
